

REFLECTIONS ON THE FUTURE OF TELECOMS REGULATION IN AFRICA

ACER 2022, SEPTEMBER 2022

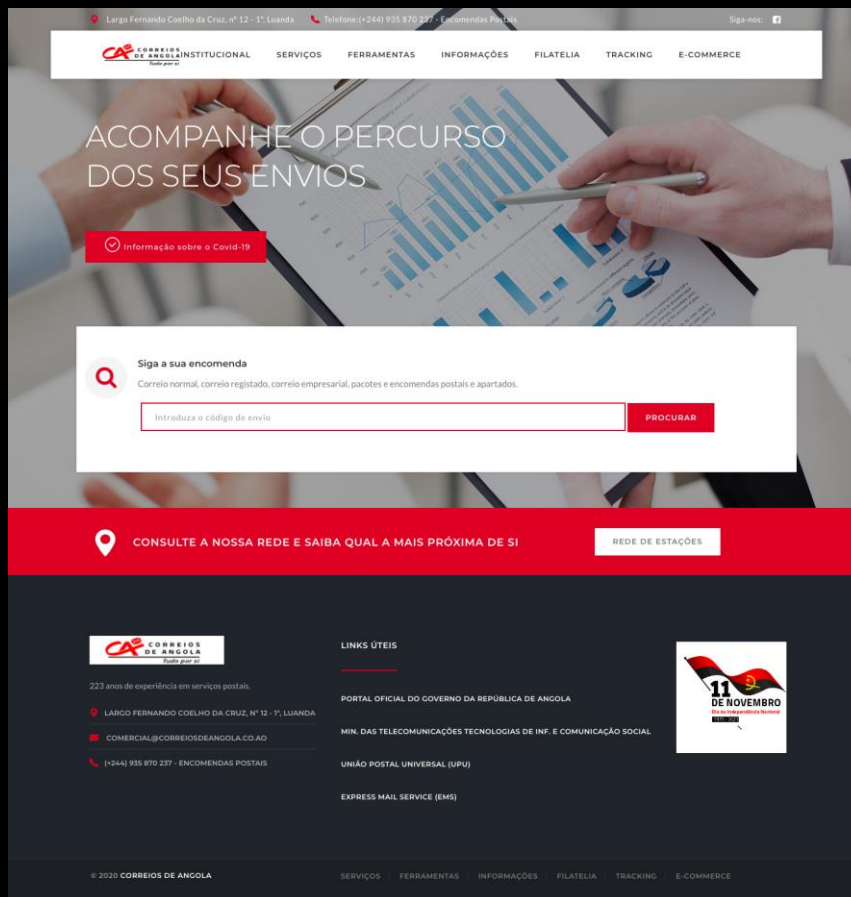

*Luci Abrahams, LINK Centre,
Wits University*

What is telecoms ie. mobile broadband, fibre and WiFi supporting?

- ✓ Transition to audio-visual online media
- ✓ Transition to digitally-enabled post/courier/logistics services for e-commerce and cross-border trade

What is telecoms ie mobile broadband, fibre and WiFi supporting?

✓ Transition to digitally-enhanced agriculture

Ghanaian agri-tech startup DigiExt is helping farm cooperatives grow via a variety of tech-based platforms and then assisting them in selling their produce to processing companies and export agencies.

Launched in 2017, [DigiExt](#) helps farmers sell their produce, access credit, and provides low-cost and convenient ICT-enabled agricultural extension services.

What is telecoms ie mobile broadband, fibre and WiFi supporting?

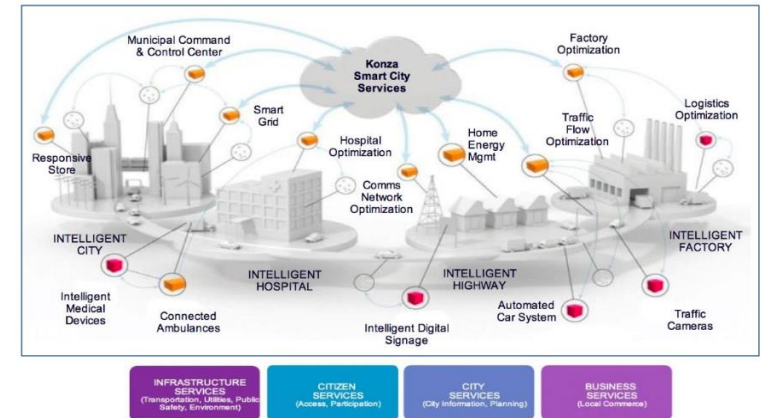

✓ Transition to digital government

✓ And “smart” environments

✓ With cybersecurity

Konza Smart City Vision - Kenya

What is telecoms ie mobile broadband, fibre and WiFi supporting?

- ✓ Transition to digitally-mediated educational content (dynamic, visual content) and health services (“know your own health”)

Download GeoGebra Apps

Free offline GeoGebra apps for iOS, Android, Windows, Mac, Chromebook and Linux

Calculator Suite

Explore functions, solve equations, construct geometric shapes and 3D objects.

DOWNLOAD

START

Graphing Calculator

Graph functions, investigate equations, and plot data with our free graphing app

DOWNLOAD

START

3D Calculator

Graph 3D functions, plot surfaces and do 3D geometry with our free 3D Grapher

DOWNLOAD

START

Geometry

Construct circles, angles, transformations and more with our free geometry tool

- ✓ And progressively digital transition across the economy

Tech hub space for young developers: Good network of spaces for digital inclusion

Over 600 tech hubs and co-working spaces, more than 50 in South Africa, where new forms of learning take place and digital innovation partnerships are fostered

Ecosystems or communities of software developers, digital makers, start-ups, SME's, corporate clients and investors in digital innovation

Start-ups, academies, incubators, workshops, 3D printing hubs and maker spaces – all tech hubs

Focus on the digital manufacturing and service applications, as enablers to all industries and sectors, aviation sector, education sector, energy sector, fashion, health, retail and other sectors

Collaborative working in tech hubs

Over 600 tech hubs in Africa, of which around 50 in Kenya (iHub, SwahiliBox, LakeHub, Mt. Kenya Hub and many others); more than 70 in South Africa (Tshimologong, others), more than 90 in Nigeria (Wennovation, others). Some focus on tech production, some focus on tech enablement

“SwahiliBox brings together investors, donors, entrepreneurs, experts, artists, and other individuals and provides them with an opportunity to share knowledge, learn, find mentors and expound on their talents, abilities and innovative ideas that will lead to the development of Kenya and globally at large”.

DIGITAL SKILLS JOURNEY

- Digital and future skills foundations
- Intermediate and advanced digital and future skills
- Digital industry and digital governance
- Digital skills for society 4.0
- Special focus on young NEETs

Number of dotted lines = number of activities per measure

- DBE, DHET, SACE, TVETs, Public sector
- DSD, DTIC, NRF, HEIs, Private sector
- DSAC, DCDT, NYDA, PSETA
- DPSA, DSI, DOH, DWYPD

- Curricula, learning material
- Changing mindset, pedagogical changes, training
- Technology, applications, platforms
- Communities of practice, community, collaborative learning
- ICT infrastructure and systemic changes
- Funding and resources
- Training of trainers
- Credentials and qualifications

Challenges and responses for future-oriented regulation:
Complex adaptive system

- ✓ Energy for mobile broadband and Wi-Fi for e-education and e-commerce = the digital economy is an integrated economy
- ✓ Requires collaborative regulation eg. energy regulator + communications sector regulator + MoF
- ✓ From sector regulator to regulator for the digital economy = shift in mandate, structure and governance
- ✓ Focus more on the innovation influencing (agenda setting) mandate of the regulator, not just on the command-and-control mandate of the regulator (pricing regulation) eg the African platform economy?

ARKILLA KERKA

Complex adaptive system: Digital ecosystem perspective

A: Regulation: New regulatory agendas and associated challenges
B: Regulatory impact: promoting the African digital economy

B: Multiple regulators co-existing across the digital ecosystem
*each with individual roles
*overlapping or unclear boundaries for regulation
*need for regular interaction, collective deliberation and regulatory alignment (eg energy and telecoms; telecoms and e-commerce)
*regulatory sandboxes for experimental forms of regulation

C: Which regulators? communications sector regulators, Central Banks and other financial services regulators, competition authorities, consumer protection authorities, health professions regulators, transport sector regulators, trade regulators, information/data privacy regulators, cyber security regulators

D: CRASA, COMESA.....SADC Model Law Framework for the Digital Economy

ARKILLA KERKA

Complex adaptive system: Digital ecosystem perspective

Regulatory research studies needed:

- *sector-by-sector digital transformation
- *understand the extent to which existing legislation provides the foundation for conducting reviews and guiding regulatory decisions
- *these studies are necessary to inform the practices of regulatory authorities, identify priority areas for attention, and clarify the roles of various regulators and any areas of possible concurrent jurisdiction, co-regulation and self-regulation
- *also necessary to provide clarity for market entrants
- *role of regional regulatory associations (CRASA, COMESA) in fostering advances in regulatory agendas and practices

Data-driven advisory services key for Africa's agricultural development

07-Jul-2020

WEBINAR SERIES
DIGITALIZATION TO TRANSFORM AGRICULTURE
IN AFRICA AND RESPOND TO COVID-19
**Data-driven solutions for
advisory and planning**

10 June 24 June 8 July 22 July

What are some of the barriers preventing small farmers in Africa from adopting digital advisory services? What do we mean by big data? What can governments do to encourage greater digital uptake?

These were some of the questions addressed during the second of four Transforming Agriculture in Africa Through Digitalization webinars hosted by the African Development Bank and the Food and Agriculture Organization's Investment Centre. During the most recent webinar, panelists explored how data-driven technologies can transform the agricultural ecosystem and contribute to policy-making and investment.

Questions
